ABOUT NEXERP

Our nexERP system is driven by our deep expertise and cross industry experience and global delivery model. We provide you a pano-view of your enterprise and enable you to optimize your processes and helps you to transform your organization with well defined, simplified and power-packed offerings which take your business to the next level. We primarily consist of service industry such as retail, hospitality, storage & transport, tourism, banking & insurance and real estate, for which nexERP software services can provide an efficient solution to take these industries to their top potential. We have clients from across the globe including UK, India, and Middle East countries.

We currently focus on the Middle East Clients and have customized software, exclusively for the clients from those areas. nexERP is also available in the local Arabic language and therefore it is easy to understand for those people with less technical knowledge. Our software is also available in mobile application, which can help you track your business status on the go without the need laptops or PCs.

CLIENT : M/s. DUFAB CLOUDS INDUSTRIES LLC

M/s. Dufab Clouds Industries is a Dubai based scrap Management Company based at Bur Dubai. It deals with the collection scrap metals from various parts of world and converts it to finished products. Dufab Clouds Industries LLC has been in the market for the last several years and had a steady growth over the years. With its growth, many new problems were faced by the company in respect to the management of raw material management, production, employee salary, transportation and the like.

CHALLENGES FACED BY THE CLIENT

The following are some of the main problem faced by the management during the stage of its growth:

- **Raw Material Management:** Dufab Industrial & Trading Company had problem with the management of raw materials. The raw materials arrived from several different places and they had problems with its handling and controlling the materials. This was one the main problem faced by the company.
- **Production Management:** Managing the production of finished products was another problem faced by the management. The production was in a sort of mess and could not be properly controlled. This was something that the management had to restore quickly for the smooth functioning of the company.
- **Driver Tracking for Delivery:** The tracking of the delivery was another place that needed immediate attention. The driver tracking system

that was in place was outdated and there was problem with calculating the time taken for delivery and when the next consignment can be taken or delivered. This was an important aspect of the company that needed immediate attention.

- **Salary Management:** The salary management of the employees was a difficult task in front of the management. There were several types of employees were employed in the industry and each type of work had a different salary. In addition to that the extra working hours and overtime calculation was very difficult to manage.

END RESULTS AFTER IMPLEMENTING NEXERP

- The NexERP helped in restoring order in raw material management. The reports could now be easily taken for taking better decision making purpose.
- The production management at Dufab Industrial & Trading Company came in line with the introduction of NexERP and the production efficiency increased.
- The driver tracking system integrated in the NexERP and its related mobile app improved the efficiency of the tracking system manifold. The GPS delivery that was integrated with the app gave the management enough time to manage and plan the next step precisely and was a great help to the management.
- The salary management of the employees of the Dufab Industrial & Trading Company could easily be maintained with the implementation

of the NexERP. The whole salary of each and every employee could now be easily managed and known precisely.
